

Why be Certified?

Current and future employers and clients searching for energy efficiency professionals always ask the same basic questions:

- **Who are you and what do you know about energy efficiency?"**
- **Can you document your experience and proficiency in the field of energy efficiency?**

The **CEEP Exam** confirms your skill level and your mastery of the field of energy efficiency using a comprehensive examination of the subject matter taught in this course and additional topics familiar to individuals in this field.

The **CEEP Certification** process provides independent, third party verification of your knowledge, and proficiency in the Energy Efficiency Profession. In addition this process validates your academic and professional achievements, and work experience for current and prospective employers, clients and colleagues.

CEEP and ISO 50001: The evolution of training for the new international energy efficiency codes and standards

Masters' new CEEP program follows the general body of knowledge currently being developed for ISO 50001. The intent of these codes and standards is to establish specific criteria for evaluating the energy efficiency and performance of all facilities and energy consuming processes worldwide.

In addition, one of the goals of ISO 50001 is to standardize the body of knowledge used to teach energy efficiency. To that end, this CEEP program will be reviewed and updated on a regular basis to reflect any changes made to the ISO 50001 body of knowledge.
